

SUBLIME ARCHITECTURAL INTERIORS

MONOCHROME MASTERPIECE

SHARP SOPHISTICATION

Designed by Sublime Architectural Interiors, this kitchen offers modern convenience with sleek and sophisticated finishes.

To achieve a successful balance between function and style, it was necessary to overcome some hurdles presented by the pre-existing kitchen design, including a large enclosed pantry, which made the space feel small and cut-off from the rest of the home.

After replacing the previous kitchen with a modern open-plan design, Sublime Architectural Interiors enhanced the room with a rejuvenated aesthetic and functional facelift. Natural light flows in from the large windows, making the kitchen a warm, open and inviting part of this home that is a joy to be in as well as being a practical work area.

A classic black and white colour scheme was selected to help ensure the kitchen won't date, while the carefully selected Statuario Venato marble island benchtop has been teamed with reconstituted stone, beautifully complementing the kitchen's chic aesthetic.

The raised cube at the front of the island screens the tap and sinks from view, and wonderfully balances the ELICA Sinfonia rangehood on the back wall. The 'boxed' frame protruding from the back wall also adds further interest to the space and is accentuated by the LED strip lighting.

Aluminium-framed glass insert doors were chosen to complement the state-of-the-art Gaggenau appliances, which blend seamlessly with the streamlined design and reflect light within the space.

An appliance pantry equipped with adjustable shelving, benchtops and ample power points has also been incorporated into the design, ensuring the kitchen remains clutter-free.

For easy access to utensils, cutlery and other kitchen items, Blum stainless steel soft-close drawers with SERVO-DRIVE electrical opening support and AVENTOS lift systems have been installed.

Environmentally-friendly lighting also features extensively throughout the design. LED strip lighting has been installed around the laminated frame on the rear wall, allowing the user to set the tone for the event occurring in the space.

LED task downlights are also housed under the same frame and accentuate the underside of the island bench and floating box at the front of the kitchen. Glass pendant lights have been incorporated over the island bench to ensure adequate lighting for all duties performed in this zone.

The overall transformation of this home has greatly enhanced the lifestyle of its occupants, who now have a space that is efficient, sophisticated and suited to their unique needs.
